

AZIENDA OSPEDALIERA DELLA PROVINCIA DI LODI

Azienda Ospedaliera della Provincia di Lodi provides its offering of healthcare services to an area of about 200,000 inhabitants. Azienda Ospedaliera della Provincia di Lodi is formed by four facilities: Casalpusterlengo, Codogno, Lodi, Sant’Angelo Lodigiano, each with a Hospital structure and territorial clinics.

Location: Lodi - Italy

Industry: Healthcare

Users: about 200,000 people living in the area, 4 facilities

Implementation Date: July 2013

Business Partner: NextiraOne

CHALLENGES

Introduction of the “Guest Users” management service for occasional guests on the Hospital wireless network infrastructure.

Fully automated access with personal devices in the frame of BYOD.

High access control and information security.

Optimization for Internal resources.

PRODUCTS AND SOLUTIONS

Alcatel-Lucent ClearPass Policy Management System

WHY ALCATEL-LUCENT ENTERPRISE

As a first step Azienda Ospedaliera della Provincia di Lodi renewed its network infrastructure with Alcatel-Lucent Enterprise solutions to enhance the management of the information flows, of the applications needed by the Hospital, of the large amount of the sensitive data collected daily and to reduce the time required to resolve any technical issue.

Alcatel-Lucent Enterprise has been chosen by Azienda Ospedaliera della Provincia di Lodi to integrate the Clear Pass solution to the existing infrastructure, ensuring a natural integration with the solutions already present in the company.

Alcatel-lucent Enterprise’s clearpass solution offers a useful additional service while reducing the work required for it managers, allowing guests to connect to the hospital wifi and to create automatically their own username and password.

BENEFITS

TECHNICAL

High access control and information security.

Integration of additional services with improvement of IT management.

FINANCIAL

The new infrastructure investment enabled the company to reduce its impact on the external resources and to optimize the workload of the IT managers.

USER EXPERIENCE

Users can access to internet easily and quickly from their personal devices.

“The new infrastructure implementation process required about four months and it was followed by NextiraOne Italy, partner of Alcatel-Lucent Enterprise. The project has been completed in a second step with the integration WIFI network to be used by our guests (patients and visitors). The fully automated access to the network helps us to optimize internal resources and has been much appreciated also by our employees, who can now access to their own personal service”.

Flavio Cassinari, CIO, Azienda Ospedaliera della Provincia di Lodi.
